HORIZONS
in Heart Care

Celebrating our 15TH ANNIVERSARY

Since bringing cardiac catheterization to our region in 1992, we've performed more than 55,000 procedures and grown into a world-class heart center.

Today, Leesburg Regional Medical Center performs the second highest volume of open heart procedures in the state, is performing minimally-invasive valve replacements that result in quicker recovery, smaller incisions and less scarring, and has been selected to participate in national clinical trials of the most cutting-edge cardiac procedures.

And that's reason to celebrate.
